

**Exhibit F**

Charyl Zehfus submission to FCC, dockets 03-137 and 12-357

March 5, 2013

**Suggestions for policy accommodations that create access for ADA protected people with Electromagnetic Sensitivity (ES).**

Access to services and places assumed to be available for everyone must be made available to the 9.5 million Americans who know or learn they are ES.

- 1) Make/promote nationwide law/code that all utilities for electric, gas and water offer devices/technology/meters that do not transmit RF wirelessly or via power lines, both of which create frequencies that harm ES people's access to use of their own homes/apartments. Disabled access to utilities must be protected by the top safety authorities.
- 2) Make/promote law to guarantee affordable telephone landline access for people with ES everywhere. They cannot usually tolerate mobile devices/phones. This could be an aspect of LifeLine.
- 3) Limit the limitless installation of wireless broadband/WiMax systems that pulse RF 24/7 affecting ES people in their own homes and every place they need to access in their area. Encourage states to have whole areas/towns/rural stretches that are 100% fiber/wired for broadband. Incentives must be offered. These "refuges" would also require no new cell towers or other transmitters be added. In some cases, existing towers would be removed or moved.
- 4) Public parks, schools and other widely used or wild areas should not have new cell towers nor spew broadband, nor use WiFi, which would blanket every person, and prevent access for people with the functional environmental disabilities relating to RF.
- 5) Create a clear, friendly path for the public to be able to complain about RF health concerns. They/we need a formal way to be heard and answered.
